Before demonstrating, ensure that the data you have put into your system can handle all of the following test cases. Please prepare before you ask us to check your application, so that running through these cases will be smooth. Fill in the ids (student identifiers and course codes) that you will use in the demonstration in the table below. When demonstrating your application it is useful if you also have psql or PostgreSQL Studio running, so that you can show the state of your tables and views.

	Student	Course
Listing information		
List information for a student who does not fulfil the requirements for graduation.	9411199442	
List information for a student who fulfils the requirements for graduation.	9311020011	
Registering and unregistering from courses		
Register a student for an unrestricted course, and show that they end up registered.	9210031820	MS002
Register the same student for the same course again, and show that the student gets an error message.	9210031820	MS002
Unregister the student from the course.	9210031820	MS002
Unregister the student again from the same course and show that it doesn't crash your program.	9210031820	MS002
Register a student for a course that they don't have the prerequisites for, and show that the registration doesn't go through.	9210031820	CS001
Restricted courses		
Before demonstrating, set up a restricted course with at least two students in the queue.	1) 9411199442 2) 9704224170 3) 9210031820	CS009
Unregister a registered student from this course. Show that the first student from the queue ended up as registered.	8908307138	CS009
Register the unregistered student again. Show that they end up last in the queue.	8908307138	CS009
Unregister this student again. Show that the student was removed from the queue, that no student was registered on the course as a result of this, and that the queue otherwise stays as before.	8908307138	CS009
Overfull courses		
Before demonstrating, set up an overfull restricted course (i.e. one with more students registered than there are places on the course) in the database directly, and with no students on the waiting list.	9704224170 9411199442 9311020011	ME002
Attempt to register a student for the overfull course. Show that this student is placed on the waiting list.	9803258004 9210031820	ME002
Unregister a student from the overfull course. Show that no student is moved from the queue to being registered as a result.	9704224170	ME002
